### Seasons of the year

The seasons are four different times during the year with different types of weather. Seasons change throughout the year because of the way the Earth moves. The four seasons of the year are **summer**, **winter**, **spring** and **autumn**.

During summer, the weather is **hot**. It is very sunny and we wear cotton clothes to keep ourselves cool. We must drink plenty of water and fresh juice to keep our body cool and healthy. We enjoy going to the beach in the evenings.

We can see lovely flowers and fresh leaves on plants and trees during the spring season. Birds chirp happily moving from one tree to another. Butterflies and honey bees move around the flowers. The weather is **warm** and pleasant in spring.

Autumn is the season when leaves turn yellow and fall off the trees. Autumn marks the transition of the summer season to winter. Weather begins to **cool down** in autumn.

Winter is the **coldest** season. We wear woolen clothes to keep ourselves warm. The days are shorter and the nights are longer in winter.

A. Fill in the blanks:

1. The four seasons are summer, winter, spring and autumn.
2. Summer is the hottest season.
3. Leaves turn yellow and fall off the trees in autumn.
4. We wear warm clothes in winter.
5. Seasons change throughout the year because of the way the Earth moves.

B. Colour the given pictures according to the seasons.
